D-scale Rapid

For the removal of lime scale and uric crystals

An aggressive, high strength scale, lime deposit and uric crystal remover that is probably the most effective on the market today.

What is D-Scale Rapid?

D-Scale Rapid is a complex blend of acids that does not incorporate harmful Hydrochloric acid. This makes D-Scale Rapid an effective and speedy answer to scale build up in toilets and urinals.

How does D-Scale Rapid work?

D-Scale Rapid is predominately a strong mix of Nitric and Phosphoric acid. This stable solution uses Nitric Acid's reactivity to inorganic compounds alongside the highly effective reaction that phosphoric acid has on lime deposits to create a most effective and rapid descaler.

Key Features and Benefits of D-Scale Rapid

- Effective - Left overnight, D-Scale Rapid will have a significant effect on any lime scale or uric crystal deposits.
- Fantastic for the removal of stubborn uric crystals, quickly removing unpleasant smells that concentrate in areas used by the public; in buildings, schools, industrial premises and public houses.
- Multi-purpose descaler.
- Descales tiling.

How do you use D-Scale Rapid?

For rapid descaling in urinals, use neat. Carefully apply the D-scale Rapid into the urinal ensuring that D-scale Rapid collects into the trap. Clean off any residue liquid from the fixtures and fittings. Close the area off to the public during descaling and rinse thoroughly when complete. In extreme cases leave overnight.

For general purpose descaling dilute 10 to 1 with water and apply carefully. To clean tiles, apply a dilution of 1 to 100 water solution onto the surface, leave for 10 minutes, rinse off thoroughly with water.

Do not apply to mild steel, chrome, zinc or aluminium. If in doubt test patch for compatibility.

Always read instructions and safety data sheets carefully before use.
