Pow Air Freshener

Odour control in a can

Smells neutralised and then completely eradicated - molecularly

What is Pow Air Freshener?

PowAir Freshener is a hugely powerful air freshener comprised of a good initial odour control with a natural fragrance and an odour destroying molecule that absorbs and changes smells. PowAir Freshener is part of the Red Rag tall can range meaning that it is packed in 750 ml aerosols, just right for tackling even large areas.

How does Pow Air Freshener work?

Firstly the power of PowAir Freshener blasts and atomises the liquid in the aerosol into the smallest of particles that remain airborne for hours. This means that PowAir Freshener continues to work far longer than expected. Then the powerful scent replaces the unwanted odours. Thirdly the odour destroying molecule based on Zinc Ricioleate destroys molecularly any compounds which are amino based (urine, nicotine, organic decomposition), sulphur based (onions, garlic and sulphites) and sweat.

Product Information

For instant odour control of: Urine, excrement, vomit, nicotine, onions, garlic, cooking fats, fish, sweat, domestic and farm animals, garbage, sewage, decomposing bodies. It can also be used to neutralise odours in fabrics, carpets, cars and shoes. Test patches should be used to check stability of dyes and fabrics.

Key features and benefits of Pow Air Freshener?

- Saves time
- Saves money
- Increase efficiency
- Improves the working environment.

How to get the best results?

Simply spray into the upper part of the room. If there are soft furnishings, such as curtains or drapes, which can absorb unwanted smells, just spray a quick burst onto the fabric.
