

Damp Guard

A silicone-based treatment solution

What is Damp Guard?

Damp Guard is a unique solvent-based silicone waterproofing treatment that is invisible to the eye, protects any porous surface against damp and water, whilst allowing excellent breathability.

How does Damp Guard work?

Damp Guard penetrates the pores and capillaries of the substrate, not forming a barrier to moisture but actually making the substance hydrophobic. Water sheds and beads on contact, yet air can pass thorough, allowing the surface to dry normally.

Damp Guard penetrates deeply into any kind of brickwork, concrete, cement render and sheeting, pebbledash, slate, tile, weathered asbestos, building boards, and almost any other porous building or roofing material.

Key Features and Benefits of Damp Guard?

Unmatched protection against water, moisture and condensation.

Leaves a breathable, hydrophobic surface that penetrates deep into the substrate.

Makes surfaces easier to clean, and less likely to discolour.

Reduces energy costs (dry substrates take less energy to heat)

Prevents cracking and crumbling.

of substrates due to water penetration.

and freezing/frost.

Easy to apply – by brush or with spray equipment.

Protects walls from fungus, mould and bacteria.

Practically invisible.

Properly applied coatings will last and protect building materials against the elements for up to 10 years

Technical Information

Dampguard should be flooded on the substrate, with a run-down of 25-30 cm (10-12") to ensure full coverage and maximum penetration. It can be applied with a brush, industrial sprayer or even a portable garden spray unit.

For your protection, always read the MSDS sheet for Dampguard before use and follow it closely.
