

RAPID RESPONSE SPILL KIT

Oil Only- for absorbing all oil based liquids

What is the problem?

The control of oil based spills and leaks.

Damming and Dyking areas so that oil based liquids do not contaminate the water sources.

What is an Oil Only-Rapid Response Spill Kit?

The Oil Only spill kit is an easy to carry bag containing a range of adsorbents that will adsorb any oil based spills.

Adsorbents are different from absorbents. Adsorb oils are held to the surface of the material instead of being absorbed into it.

All materials in this kit are colour coded in white so that they are easily recognised as being adsorbents that are used for oil spills.

The socks pillows and pads will float on water indefinitely and will adsorb hydrocarbons like a magnet. They work excellently on spills of oils, paraffin, diesel, petrol, turps and paint.

Safety - The kit comes with gloves, overalls, goggles and mask to ensure that PPE is available for the operative.

Bags are provided for safe disposal of used adsorbents, they also have a notification panel so that the contents can be flagged on the bag.

Where can the Oil Only Spill Kit be used?

It is essential for dyking drains and manholes and stopping an oil based spillage contaminating the water sources. Excellent for dealing with leaking machinery and oil containers when cleaning spills that are causing a slip hazard around walkaways and workshop floors. If the oil has reached water, float any of the pads pillows or socks on the surface where it will adsorb the spill. It will not adsorb water.

What is in the kit?

40 pads, 3 x 1.2 metre socks, 1 x 3 metre large sock, 1 large pillow, 1 small pillow, 1 complete PPE outfit and 3 disposal bags and ties, total adsorbent capability of 88 litres.
