

# Treadsafe Express

## Instructions for Use

Ensure that the area to be coated is sound and free from oil, grease and loose material. If necessary, prepare the concrete with Concrete Etch. Non porous surfaces may be cleaned and degreased using Multi Clean. Any form of vegetation or mould may be removed by using Multi Wash. The substrate temperature should be between 10°C to 30°C for the application. Mechanically abrade the area to provide a key for the coating.

Remove all debris by sweeping and/or vacuum. Use masking tape to mark outer edges of coated area.

Empty activator into the base component container and mix with spatula or mechanical paddle for 5 minutes.

Apply one coat (at a rate not exceeding 10m<sup>2</sup> per 15kg kit and 5m<sup>2</sup> per 7 kg kit) to the substrate by brush or roller. Immediately blind with aggregate supplied.

Remove masking tape whilst coating is still wet.

After the coating has cured, remove excess aggregate with a soft brush.

Allow up to 24 hours for light traffic and up to 7 days for the full chemical cure.  
For interior use.
