User shall determine suitability of product for use and assumes all risk. The seller will not accept liability for more than product replacement.

VIRAKILL

SOMETIMES ATTACK IS THE BEST FORM OF DEFENCE!

How do I use Virakill?

Two cleaning cloths have been specifically manufactured for use with Virakill – each having a particular role. The non-absorbent cloth is to spread Virakill evenly across a surface for sanitisation. The microfiber cloth is to clean a surface and absorb Virakill.

- **To sanitise surfaces and kill 99.99% of bacteria** - spray Virakill directly onto surface and use a non-absorbent, dry cloth to spread Virakill evenly across the whole surface. Leave to dry for at least 30 seconds to ensure full sanitisation.
- **To clean a surface** - spray Virakill directly onto surface and using a microfiber cloth, wipe across the surface. Repeat if necessary.

Do not use this product in food preparation areas.

How does Virakill work?

Virakill forms an antimicrobial coating on a surface. It contains polymers that repel microorganisms, germs, bacteria, viruses etc., that want to land and colonise on surfaces. This coating gives lasting protection, continuing to protect against bacteria and viruses for up to 8 days. If it is a surface that you use a lot, or it is a heavily soiled area, then we would always recommend cleaning the surface again before you use it.
