

BLAST OFF

High Pressure Air Duster

Electrical

Electrical systems suffer from deposits of atmospheric dust and particles which can cause poor ventilation, overheating and reduction in contact surface areas.

Why is Blast Off so effective?

The compressed air in Blast Off contains Tetrafluoropropene which has many attractive properties for a safe, effective, inexpensive and convenient duster. Tetrafluoropropene is not flammable.

Blast Off is generally non-reactive with most substances, so it is safe to use with delicate electronics and anything else that may need residue removing. Blast Off is packed with a high degree of purity, meaning that there is nothing mixed in that can cause problems.

Blast Off is very dry and clean, leaving no noticeable residue of any sort on your equipment.

How to get the best results?

Switch off the electricity when using on delicate circuitry. Make sure to hold the canister upright and spray to remove debris from hard to reach areas.

CAUTION - Aerosol cans containing Tetrafluoropropene, when inverted, become effective freezer sprays. This can be useful when fault finding in electronic circuits. This can result in frostbite if it makes contact with the skin, as well as blindness upon eye contact.

Other areas of use

Can reduce computer failure from blocked or dirty fans.

Can be used on all printers, keyboards and office equipment.

Clears dust and debris from electrical switches, sockets and dust filters.

Health and Safety

Please ensure good practice is observed at all times during use of this product. Before using, please ensure you have read the Safety Data Sheet.

What are the benefits of Blast Off?

Removes all loose particles

Reaches inaccessible areas

Does not introduce contaminants, which can happen if air-lines are used
